History of Education and Current Advancements in Schooling

In the Middle Age, there was monarchy followed in all parts of the world with privileged royalty, masses of slaves, and serves. But the ratio of kings and lords to that of the slaves was a lot less. There was a large mass of people put to servitude, including the children. The children were brought up with the knowledge of obedience, suppression of thoughts and were given the straight away notice for not being rebellious or would get killed.

With the rise of industrialization, the feudalism saw a downfall. It wasn't sudden but gradual. It didn't affect the lives of people as much in one go. Other problems aroused, indeed. There were business classes, which were the privileged class of the world then but this time it was more in the mass number. Children of the unprivileged section were pushed into factories to work, which was similar to the slavery culture of hierarchy. In the 19th century, England passed a law for limiting child labor. Later, a lot of counties followed up the rules and regulations in their areas too, with limitations or regulations or none. For the years till the 19th century, the education of children was limited to get trained as skillful labor. The child who could suppress his or her urge to do what they wanted to, be obedient to their masters, and be responsible to have all the work assigned done – were considered great students. There was a lot of physical punishment and beating that were the consequences of the students going up against their masters. With time, the philosophy and techniques linked with the education system and how it could pact life changed and evolved. The degree course programs were put into value. There was arousal of demand to make education compulsory. As the modern era was looked upon, things started getting automated. Child labor was completely nullified in some parts of the country. There was slowly a widespread idea that the children deserve a childhood which is termed as a time for learning and hence, people started schools as a place of learning. The idea and implementation of compulsory schooling started in Europe, in the 19th century that gave away for education in other parts of the world also. The schooling was seen as the future of the industry for better work, for employee hiring. Suggestions were many for subjects to be included in the curriculum, but finally, there was a wide division of subjects and courses that were made to inculcate truths and ways were implanted to help children grow mentally. In today's' date, the career is solely based on the school's academics and progress. There are undergraduate and postgraduate programs that train students for specific jobs.

Advancements in School Curriculum

In the traditional way of education, the students were made to sit within four walls where they can learn from books and the teacher guides them to gain knowledge. Today, with the application of technology into all the lives of normal people. So, it has been introduced in the learning process as e-learning. In the process of e-learning, the students are made to learn everything from online modules. There is a huge benefit to the management and administrative team of schools. It helps in all sorts of collection of data and managing them, storing students' data. And, all that can be accessed through a single dashboard. Parents can keep a track of student's progress as well. Tests and evaluations are made online. There is a lot of lessened workload from faculty and employee, also it saves a lot of time.

School Eye – how can it help?
